Task 1 Report

Responsive Web Page

Name: Diksha Rupani
Email: drupani@email.com

Task Title: Developing a Responsive Web Page for Company Member Team Page

Task Description: The task assigned to me was to create a responsive web page for the Company Member Team Page. The design reference provided for this project was "designed-1" which was attached to the task. The goal was to use HTML and CSS to bring the design to life and ensure responsiveness across various devices. This project allowed me to showcase my coding skills and creativity while adhering to the design reference.

Steps Taken:

1. I carefully studied the design reference and identified the key elements and components that needed to be included in the web page.

2. I created a basic HTML structure for the web page, including the necessary tags and elements.

3. Using CSS, I added styles and formatting to the page, following the design reference closely.

4. I made sure to use responsive design techniques, such as media queries, to ensure the page would adapt to different screen sizes.

Challenges Faced: The main challenge I faced was ensuring the page was responsive across all devices.

Solutions Implemented: To overcome the challenge of responsiveness, I used media queries to adjust the layout and styles for different screen sizes.

Learnings: This project helped me improve my HTML and CSS skills, especially in terms of creating a responsive design. I also learned the importance of testing and making adjustments to ensure a consistent user experience across devices.

Project Update: I have successfully completed the task and the responsive web page for the Company Member Team Page is now live. I am looking forward to receiving feedback and making any necessary improvements.
